Durable Labels in Any Size!

For durable labels from wide to narrow, look no further than the Kiaro! D family of label printers

Labels That Stand Up To Any Test

The Kiaro! D family of label printers is our newest label printing innovation, and boasts a powerful new method of printing durable labels for any application. The Kiaro! D, the Kiaro! 50D, and the Kiaro! 200D are the ultimate solution for durable in-house, on-demand label printing, for any application, on any label size, paper or polypropylene, and with no lamination necessary!

Thanks to cutting-edge pigment-based ink formulation and QuickLabel's qualified label stocks, labels printed by the Kiaro! D family of label printers stand up to daily abuse from chemical solvents, water, UV light, and scuffing. Plus, labels printed with any Kiaro! D label printer comply with GHS hazard warning labeling regulations, one of the most stringent physical label standards in the world.

Pigment Based Ink: Tough and Gorgeous

The Kiaro! D family of label printers uses an innovative solution from QuickLabel Systems: pigment based ink. The beauty of this revolutionary solution is that while it has incredible durability against abrasion, chemicals, moisture and solvents it doesn't give away any of the legendary Kiaro! label quality. Printing in 1200 dpi ensures photo-quality images on your labels, fine text, beautiful vivid colours that don't run, scratch, or fade away.

Ideal for GHS and more!

The Globally Harmonized System of Classification and Labelling of Chemicals (GHS) regulations coming into effect in 2015 include some of the most stringent label durability compliance standards in the world. It was with these standards in mind that QuickLabel Systems developed the Kiaro! D family of label printers. Whether you're printing labels for tiny chemical vials that require legible fine text, or need labels for gallons of chemicals and solvents that can be seen from across a warehouse the Kiaro! D family

The Kiaro! D Label Printer Family:

Kiaro! D — The Kiaro! D prints labels from 25mm-105mm wide and up to more than 380mm in length. It's perfect for bottle, carton, case, and pack labels that require printed product pictures, logos, color codes, barcodes, and other variable data elements.

Kiaro! 50D — The Kiaro! 50D is a miniature color label printer designed for making small, durable labels from 25mm–54mm. Standing at 250mm tall and weighing just over 4.5kg, the compact size of the Kiaro! 50 may be deceiving – in fact, it is capable of printing up to 120mm per second.

Kiaro! 200D — Printing on labels from 108mm-214mm wide and up to more than 450mm in length, and with four separate, large-capacity ink cartridges and low running costs, the Kiaro! 200 is a perfect fit for on-site labeling of larger products including pallets, gallon jugs, barrels, and more!

Taking after its revolutionary predecessor, the Kiaro! label printer, the Kiaro! D is designed to print labels that get dirty, wet, scuffed, and exposed to sunlight and chemicals—all while maintaining legibility and colour fastness without lamination. The Kiaro! D is perfect for bottle, carton, case, and pack labels that require printed product pictures, logos, colour codes, barcodes, and other variable data elements. Its reliable operation, 120mm/sec. print speed, and 1200 dpi print quality make the Kiaro! D a star performer for your packaging room or production facility.

The Kiaro! 50D

The Kiaro! 50D is small and tough. It prints small labels that withstand big challenges from industrial environments at high speeds. Standing at 250mm high and weighing just over 4.5kg, the compact Kiaro! 50D is an easy fit in small work spaces that do not accommodate larger label printers. The Kiaro! 50D is ideal for printing small GHS labels, medical device labels, clinical trials labels, pharmaceutical labels, supply chain "pick and pack" or "track and trace" labels, and labels for other applications that require printed labels to endure environmental challenges such as exposure to chemicals, solvents, moisture, or abrasion.

The Kiaro! 200D

The Kiaro! 200D is the quintessential wide format label printer, capable of making GHS labels in large sizes for gallon jugs, shipping drums, pallets, and cases—all in full CMYK colour. This means that you can print labels with the required black and red GHS pictograms alongside company logos in any colour, product pictures, and colour codes. Naturally, adding batch codes, lot codes, variable text, and barcodes is easy too. Labels printed by the Kiaro! 200D are large enough to identify products from a distance, in sizes from 108mm-214mm wide and up to more than 450mm in length.
